PROFESSIONAL SUMMARY

Frontend Engineer specializing in React and TypeScript architecture for complex, data-intensive products. Built the frontend foundation of IntelliPharma, a bilingual pharmaceutical ERP/CRM spanning 1,100+ source files, 21 domain entities, 60 feature slices, and 67 route-level pages. Strong in Feature-Sliced Design, typed API boundaries, TanStack Query data orchestration, role-based access control, resilient session management, real-time workflows, and performance-focused UI delivery. Experienced directing AI-assisted development from requirements and architecture through critical code review, debugging, optimization, validation, and production delivery.

TECHNICAL SKILLS

Core: TypeScript, JavaScript, React 19, Next.js, HTML5, CSS3

Architecture: Feature-Sliced Design (FSD), React Router v8, component architecture, design systems, role-based access control (RBAC)

Data & State: TanStack Query v5, Redux Toolkit, Axios, REST APIs, WebSockets, BroadcastChannel API, Web Locks API, Laravel Echo/Reverb, Suspense, infinite queries

UI & Forms: Tailwind CSS v4, shadcn/ui, React Hook Form, i18next, responsive design, Arabic/English RTL

Visualization & Interaction: Recharts, React Leaflet, OpenStreetMap, barcode scanning, Motion

Quality & Delivery: AI-assisted development, Vite, Git, GitHub, ESLint, Prettier, lazy loading, code splitting, service workers, error boundaries, accessibility, Vercel

SELECTED ENGINEERING PROJECTS

IntelliPharma | AI-Driven Pharmaceutical ERP/CRM

React 19, TypeScript, Vite, React Router v8, TanStack Query v5, Redux Toolkit, Axios, Tailwind CSS v4, shadcn/ui, Laravel

- Architected a strict Feature-Sliced Design codebase across app, pages, features, entities, shared, and widgets layers, keeping dependency direction explicit across 1,100+ source files.
- Designed a two-layer data architecture: a typed Axios apiClient with interceptor-normalized ApiResponse<T> and localized ApiError handling, plus reusable TanStack Query hooks for Suspense reads, infinite lists, and CRUD mutations with domain query keys, language-aware caching, and centralized side effects.
- Implemented backend-authoritative RBAC from session state through permission parsing, protected routes and direct URLs, permission-aware navigation, and capability-driven UI that fails closed when access is missing.
- Integrated and validated a real-time field-team tracking client over authenticated Laravel Reverb channels, reconciling an initial REST snapshot with timestamped WebSocket events in a normalized external store; coalesced bursts and modeled stale-data and connection states.
- Engineered a reliable push-notification lifecycle with backend-confirmed, user-scoped token fingerprints, cross-tab locking, bounded retry and recovery, idempotent message handling, and service-worker delivery synchronized with Redux and TanStack Query state.
- Engineered cross-tab authentication as a concurrency system: serialized rotating refresh-token exchanges with Web Locks, coalesced simultaneous in-tab refreshes through promise sharing, and propagated login, refresh, and logout through BroadcastChannel to keep Redux session state consistent across open tabs and prevent refresh races or false session expiry.

PROFESSIONAL EXPERIENCE

Sniper Games | Session Management PWA

Freelance Product Developer | AI-Assisted / Vibe-Coded Delivery | 2026

React 19, TypeScript, Vite, Tailwind CSS, Jotai, Motion, Radix UI, PWA/Service Workers

- Delivered an offline-first Arabic RTL application for managing timed and open-ended PC and PlayStation sessions, with configurable pricing, live cost calculation, warnings, summaries, persistent local data, and automatic timeout finalization.
- Directed a transparent AI-assisted workflow accepted by the customer, owning requirements, product and architecture decisions, UI iteration, generated-code review, debugging, performance optimization, validation, and final delivery.

ADDITIONAL PROJECTS

Ouzoun | Dental Workflow Management Platform

Next.js 15, TypeScript, ASP.NET, Firebase | [Ouzoun live demo](#)

- Built an administration platform for dental operations, tools, implants, assistants, and analytics, integrating an ASP.NET backend with two Flutter mobile applications.
- Implemented real-time notifications, role-based administration, and interactive analytics dashboards to support connected clinic workflows.

CaseCobra | Custom Product E-Commerce Platform

Next.js, TypeScript, Stripe, Prisma, UploadThing | [CaseCobra live demo](#)

- Developed an end-to-end customization and checkout flow with image upload, live product preview, persisted product configuration, database integration, and secure Stripe payments.

Stacked | Interactive Grid Puzzle Solver

React, TypeScript, Redux Toolkit, Tailwind CSS, Framer Motion | [Stacked live demo](#)

- Implemented DFS, BFS, A*, and uniform-cost search with animated path visualization, predictable state transitions, and responsive interaction across screen sizes.

EDUCATION

Information Technology Engineering | Software Engineering Specialization

Damascus University | Fifth Year | Expected Graduation: 2026

TRAINING & CERTIFICATION

Frontend Development Track | Prokaders

Certificate of Attendance | 16 hours of online training

LANGUAGES

Arabic: Native | English: Fluent
